NetDMR

Catch the Wave

What is NetDMR?

NetDMR is a Web-based tool that allows NPDES permittees to electronically sign and submit their discharge monitoring reports (DMRs) to EPA's Integrated Compliance Information System (ICIS-NPDES) via the Environmental Information Exchange Network. NetDMR is designed to reduce the burden on EPA, states, and the regulated community; improve data quality; provide a cost savings; and expand the ability of both states and EPA in targeting their limited resources to meet environmental goals. An essential component of NetDMR is the exchange of data with ICIS-NPDES allowing permittees to complete a DMR that is specific to their permit limits and outfalls (now called permitted features).

What are the Region 6 plans for NetDMR Implementation?

The NetDMR program is now available. Be sure to Catch the Wave! NetDMR training will be held on a quarterly basis. The first Webinar is in January 2012. You are invited to attend NetDMR Permittee and Data Provider training that will be held on January 10th and 12th, 2012. We recommend that you attend both training sessions. Upon completion of NetDMR training, permittees will be able to log on to the **NetDMR Test database** and allow staff to try different roles and responsibilities, perform direct DMR entry or importing DMR data, and signing forms. After one or more successful transmissions of DMR data, you can create your account, submit the signed Subscriber Agreement to Region 6, get approval for Signatory and Permit Administrator authority, and go "live" in time for your future DMR submittals.
